

Unilin MDF

Even better
in your
hands

 UNILIN

Why go for Unilin MDF?

- **Premium quality:** Experience the difference with our MDF panels featuring a superior, high-density surface. Thanks to their natural resins from a single softwood species and high surface density, these boards absorb less, making them perfect for e.g. lacquering and painting.
- **Sustainability at its core:** Our MDF is crafted from 100% recovered wood, giving a second life to wood that would otherwise be discarded or burned for energy. By choosing Unilin, you're reducing waste and CO₂ emissions.
- **Specialty MDF for every need:**
 - **Ultralight:** Lightweight yet durable, this MDF is perfect for applications where weight matters, like transport, handling, and ease of use, without compromising on surface quality. Truly one-of-a-kind in the market.
 - **Fire-retardant:** Built with safety in mind, these panels reduce flame spread and smoke development, making them a smart choice for commercial spaces, schools, and public buildings.
 - **Black-colored core:** A design-forward solution with a consistent color throughout the core, perfect for exposed edges or creative cuts. Strong and versatile, it's even suitable for load-bearing applications in humid conditions.
 - **MR50:** Moisture-resistant panels for reliable performance in humid conditions.
 - **NAF (No Added Formaldehyde):** Ensures better indoor air quality, meeting the highest health standards.

The secret of Fibrabel & Fibralex MDF?

It's their unique density profile (62 lbs/ft³). These boards have an exceptionally high-density surface, delivering a surface quality that is equal to or even better than boards with a higher overall density.

ULTRALIGHT

Lightweight performance: A lightweight solution designed for applications where weight matters (transport, handling, ease of use) without compromising surface quality.

FIBRABEL
ULTRALIGHT*

FIBRABEL
ULTRALIGHT PRIME

FIBRABEL

Your qualitative basis: A light MDF board with a smooth, hard and firmly compacted surface density. Ideal for lacquering or painting.

FIBRABEL PRIME

FIBRABEL MR NAF (MR50)*

FIBRABEL FR XP*

FIBRALUX

High density: MDF boards with a high density, offering additional strength for heavy-duty applications & enhanced machinability (routing). Perfect for precise work, even down to the core.

FIBRALUX MR FR NAF (MR50)*

FIBRALUX MR FR NAF (MR50)*

BLACK

Versatile black: Black colored in the core. For a contemporary look and many possibilities: raw, varnished or finished with melamine, HPL, veneer, ...

FIBRALUX MR BLACK*

FIBRALUX FR BLACK

COMPACT

Compact density (+/- 65 lbs/ft³): A strong MDF with exceptional impact resistance and minimal swelling. Easy to machine for drilling, milling and perfect for finishing with TFL, HPL, veneer, ...

FIBROMAX COMPACT MR BLACK LF+

BIOBASED

The most sustainable MDF in the world: Made from 100% recovered wood and revolutionary plant-based resin with no added formaldehyde. Unmatched in quality and the first product of its kind on the market.

FIBRALUX BIOBASED
